

INDUSTRIAL AUTOMATION SOLUTIONS

REVAMPING
RETROFIT
SPARE PARTS SERVICE

.....

Motek designs and builds tailor-made solutions to extend the service life of industrial systems, ensure operational continuity, and bring machinery into line with the latest technological and safety standards.

INDUSTRIAL REVAMPING AND TECHNOLOGICAL RETROFIT

Technological evolution does not necessarily require the replacement of existing systems.

Regenerating current assets is a strategic lever to enhance both competitiveness and production sustainability. Motek's modernization interventions bridge the technological gap of outdated machinery, combining the robustness of original mechanics with the capabilities of modern control systems.

REVAMPING – Renew and regenerate

Comprehensive refurbishment of the machine or production line. Mechanical overhaul, upgrade of electrical and control systems, and optimisation of layout and operational performance.

RETROFIT – Upgrade with new technologies

Integration of modern automation, control and safety systems into existing machinery. Installation of next-generation controllers, sensors and communication modules.

COMPLIANCE – Standards and certification

Work carried out in compliance with Italian Legislative Decree 81/08 and Machinery Directive 2006/42/EC. Installation of safety guards, upgrading of electrical panels and emergency stop systems, and verification of technical documentation.

One choice, many benefits.

Extends machinery service life · Reduces costs compared with new equipment · Ensures regulatory compliance · Minimises production downtime

SPARE PARTS SERVICE AND SPECIALIZED LOGISTICS

Spare parts management and operational continuity.

Ensuring maximum plant availability requires a perspective that goes beyond the simple supply of components. Motek's technical and logistics support service is designed to provide a rapid response to production criticalities, combining fast sourcing with deep engineering expertise.

SPARE PARTS SUPPLY

- Mechanical, electrical and electronic spare parts for any automation system
- Warehouse with over 250,000 unique items actually in stock
- Fast sourcing of complex or hard-to-find components
- In-house repair whenever structural integrity allows
- Adaptation of updated spare-part versions to older machinery
- Conversion and compatibility between different environments or brands for mixed or obsolete production lines

OBSOLESCENCE AND TECHNICAL ADAPTATIONS

For machines or control panels fitted with discontinued or no longer compatible components, the Motek team designs and implements adaptations that allow updated spare parts to be used, avoiding production downtime or the complete replacement of the system.

SUPPLY ON REQUEST

In addition to service agreements, Motek also supplies spare parts on request. Customers can purchase individual components available from stock or by order, with delivery times determined by actual availability and Motek's partner network. An ideal solution for companies with their own maintenance programme or occasional requirements.

CONTINUOUS SERVICE SUPPLY AGREEMENT

For companies seeking a structured and reliable approach, Motek offers a **spare-parts supply agreement** that ensures immediate availability, guaranteed delivery times and scheduled management of critical components.

Availability guarantee

Annual fee, with spare parts purchased as needed. Reserved stock availability for strategic components.

Supply with spare parts included

Annual fee including the spare parts covered by the maintenance plan. Tailored definition based on production cycles.
